

Donated Bone

Trauma & Orthopaedics

The prevention of infection is a major priority in all healthcare and everyone has a part to play.

- Please decontaminate your hands frequently for 20 seconds using soap and water or alcohol gel if available
- If you have symptoms of diarrhoea and/or vomiting, cough or other respiratory symptoms, a temperature or any loss of taste or smell please do not visit the hospital or any other care facility and seek advice from 111
- Keep the environment clean and tidy
- Let's work together to keep infections out of our hospitals and care homes.

In preparation for surgery your Consultant will have discussed the possibility of receiving donated bone from another patient. This leaflet helps to explain what is involved.

How is bone donated?

Bone is donated by another patient during hip replacement surgery when the ball part of the hip joint [known as the head of femur] is removed and replaced. Instead of discarding this bone it is donated and stored.

How can donated bone be used to help me?

Donated bone (known as allograft) is "ground-down" at the time of your operation and then used to build-up the bone that has become worn or damaged. Allograft can take many months to incorporate so if your surgery has been to your hips or lower limbs you may need to use crutches while the bone heals. Your Consultant will give you advice about any precautions that you will need to take.

How are donors checked?

All potential donors are carefully assessed and questioned about their suitability by an experienced Nurse.

Blood samples are taken to ensure that the donor is free of infections such as HIV/AIDS, Hepatitis B&C, Syphilis and HTLV-1 & 2. Samples of the donated bone are also tested for signs of infection.

How safe is donated bone?

By carrying out the above tests all reasonable precautions will have been taken to minimise any risks to you. Furthermore, donated bone will not be available to any patient until all the above tests and checks have been completed.

Where can I find further information?

If you have any questions or concerns please contact your Consultant or the Bone Bank at the address below.

Bone Bank

Pre-operative Assessment Clinic
Hollybank Day Case Unit
Level 3
Cannock Chase Hospital
Brunswick Road
Cannock
WS11 5XY
Telephone: 01543 576589
